Discount Stacking — SRM Field Playbook

B2B Commercial Strategy · Internal Go-Live: Monday, November 9, 2026

The SRM Mandate: Growth@ informs suppliers that mechanics are changing, but **you** make the commercial math land. Make this transition feel like a simplification they control—not a Q4 cost surprise.

---

1. Timeline & Key Milestones

Date Window	Milestone	SRM Action
Sep 24 – Oct 2	Internal Prep	Complete mock pitch with assigned L3+ category lead.
Mon, Sep 28	Growth@ Notice	Supplier-facing email deploys. Do not assume read; send follow-up within 48h.
Early October	Partner Home Visibility	Net stacked cost calculator goes live in Partner Home.
Tue, Oct 13 (11am ET)	Supplier Webinar	Push supplier pricing/finance leads to attend.
By Fri, Nov 6	Final Confirmation	Input updated in Pricing Home OR explicit confirmation to keep `[X]%`.

Mon, Nov 9	**Go-Live**	Backend switch flips. Spot-check hero SKUs.

Support Channels: `#temp-stacking-questions-26` *· Office Hours: NA Tue/Thu 3:30 PM ET; WGS Wed 4:00 PM ET.*

2. Core Mechanics (Rules at a Glance)

Do not debate the engine. Know these five rules cold:

1. **The Hierarchy:**
   Base Cost→Live B2C Promo (Cyber/Way Day)→Everyday B2B applies to that Promo Cost
   Example: $100 Base→10% Promo=$90→5% Everyday B2B off $90=$**85.50 Pro Cost** .
2. **Flash Deal Rules:** Flash Deals stack on the live B2C promo, **not** on top of Everyday B2B. If an item is on Flash, the Pro customer receives the Flash price. If Flash matches or beats Everyday B2B, the Pro Price flag temporarily disappears (expected behavior—the customer is already getting the lowest price).
3. **No Room Stacking:** Event, weekend, superroom, and extended discount rooms still do **not** stack with each other.
4. **Promo Room B2B Deprecation:** The B2B column in promo rooms is eliminated. Leftover promo spreadsheet inputs will be ignored on Nov 9. Pro pricing **must** live as Everyday B2B in Pricing Home.
5. **Non-Negotiable Guardrail: Never allow a supplier to reduce B2C promotional depth to fund B2B.** Consumer events and Pro pricing are separate commercial decisions.

---

3. Account Prep & Prioritization

Pull your portfolio data sheet and record two metrics for each supplier:

- `[X]%` = Current Everyday B2B on file in Pricing Home.
- `[Y]%` = Last 90 Days (L90D) effective B2B discount delivered during promotions.

Prioritized Order:

1. **Egregious Discount Flag:** Stacked outcome >20% or significantly above their L90D average ***`Required Outreach`***
2. **Full Erosion:** High `[X]%` on paper, but `~0%` delivered historically due to constant event participation. ***`Highly Recommended Outreach`***
3. **Partial Erosion:** Moderate gap between `[X]` and `[Y]`. ***`Recommended Outreach`***
4. **Limited Erosion:** <1% difference between `[X]` and `[Y]`. ***`Optional Outreach`***
5. **Zero Everyday B2B:** Low-friction outreach; confirm status quo or invite to participate. ***`No Outreach Required`***

The Ask Ladder (in order):

1. **Maintain `[X]%`:** Best outcome for Pro traffic and sales velocity.
2. **Align to `[Y]%` (Investment-Neutral):** Matches what their P&L actually delivered over L90D.
3. **Floor at 5%:** Minimum threshold required to earn the Pro Price site badge and filter.
4. **0% (Deliberate Choice):** Acceptable if escalated, but confirm they understand the total loss of Pro merchandising.

5. FAQs & Edge Cases

Objection Handling

"This is just a margin grab by Wayfair."
"Today `[X]%` is not what has been invoicing during events—effective has been about `[Y]%`. Starting November 9, the system will honor whatever is entered in Pricing Home. If `[X]%` was never intended through Cyber, we adjust to `[Y]%` and your net investment stays exactly where it has been. What we cannot do is leave `[X]%` in the tool and rely on event clashes to wipe it out."

The Closing Fork:
"Does `[X]%` represent what you want to deliver during holiday events, or is `[Y]%` the more realistic number for your margin?"

Face-Saving Framing Line:
"This is correcting a stale setting, not agreeing to a new rate."

"We will take points out of B2C event depth to fund this."
"I have to be direct on that one: we cannot fund Everyday B2B by thinning our Black Friday or Cyber event submissions. Consumer events need to stand on their own to drive traffic. If the stacked Pro cost is too rich, we change Everyday B2B—keep `[X]%`, move to `[Y]%`, or go lower. We would never want to pull margin from consumer events."

"Fine. Set it to 0%."
"You can do that, and it takes effect immediately. Just be aware of what turns off: the Pro Price flag, the Pro Price filter (the #1 filter on the Pro site), and the conversion those drive. There is no promo-room workaround once Everyday B2B is zero. If zero is a reaction to

stacking rather than a planned margin strategy, can we park at `[Y]%` through Q4 and look again in January after you review net POs in Partner Home?"
(If they hold: "Understood. I will log Everyday B2B at 0% as your decision")

"We'll just handle this later / wait and see after Cyber."
"The backend engine will not wait. Whatever is in Pricing Home on November 9 is what stacks. Waiting is making a decision to keep `[X]%`. If that wasn't your intent, we should make the adjustment in October."

"What happens to our Flash Deals?"
"Flash Deals will stack on top of the live event cost, but they do not stack on Everyday B2B. The customer receives whichever price is lowest. If Flash matches or beats Everyday B2B, both prices tie and the Pro Price flag temporarily steps aside. The standard per-SKU Flash fee still applies."

"Nobody told us. This is last minute."
"The site change is November 9. Growth@ goes out late September, the supplier webinar is October 13, and net cost visibility lands in Pricing Home in early October. That is why I am bringing it to you now—so you can choose the input with time to spare."

“Can I submit a discount below 5%?”
“A B2B Discount of 1-3% will likely not activate the Pro Price Flag. Our system looks for a material difference between the B2B and B2C prices before showing a Pro Price Flag, and a <5% discount often does not create a large enough impact for us to demonstrate that strong value to our B2B customers. This is why we have the 5% minimum for Everyday B2B Discounts - this is the wholesale cost discount that we know will demonstrate value to B2B customers and our system will return a Pro Price Flag.”

"Can you just do it for us?"
Suppliers should update Pricing Home directly (or SRMs can assist only if standard partner support processes already permit account-level pricing maintenance).

---

6. SRM Workflow, Ghosting & Escalation Protocols

- **Ghosting Protocol (Post-Growth@):** Do not assume they read the September 28 notice. Send a short email; if there is no response within 48 hours, drop a 15-minute calendar hold titled: *"15 min — November 9 discount change."*
- **High-Risk No-Shows:** Any supplier in the Egregious Discount (>20% stacked or >10 pt gap) or Full Erosion bucket who ignores email/calendar invites + multiple follow ups prompts a phone call
- **Paper Trail:** Every agreed discount target should be documented in your SRM notes, confirming whether the supplier chose to keep `[X]%`, align to `[Y]%`, or drop to 0%.

---

7. Same-Day Recap Template (3-Line Email)

Subject: Next steps: Everyday B2B discount setting for November 9
Hi `[Supplier Name]`,

Thanks for walking through the November 9 discount update today. As discussed, Everyday B2B will now apply on top of promotional event costs rather than being overridden:

1. **Agreed Direction:** We agreed to `[maintain current [X]% / adjust Everyday B2B to [Y]% / set to 0%]` in Pricing Home prior to November 9.
2. **Where to Edit:** You can confirm or adjust this percentage at any time under **Pricing Home → B2B Discounts**.
3. **Resources:** If your finance team would like to review the backend mechanics directly, the supplier webinar is on **Tuesday, October 13 at 11:00 AM ET**.

Best,

`[SRM Name]`
